

Danfoss OnLine

Control your heat pump remotely **A conveniently comfortable way to stay warm.**

With the Danfoss OnLine accessory you can control and monitor your heat pump from any mobile phone, computer or tablet, wherever you are in the world. For example, you can lower the temperature in your home whilst you are on holiday, and increase it again for when you come back. If you come home earlier than expected; no problem – using OnLine, you can easily ensure that your house is warm and comfortable whenever you need it to be.

At any time of day, you can use OnLine to check that your heating system is working and what temperature your home is at. If anything unexpected comes up and needs to be fixed, you – or your installation engineer, where agreed – will immediately receive this information via OnLine. You can also control and monitor several locations if you need to; for example, if you have a summer cottage with a heat pump or have relatives who need assistance. OnLine is, of course, available for both Android and iPhone.

no matter where
you are.

Danfoss OnLine – functions and benefits

- New OnLine can be connected directly to your existing broadband at no additional cost
- With New OnLine customer/installer is always updated that heat pump works properly, can check the status of the heat pump and change settings (mode, temperature, calendar) via the smartphone application or PC – wherever, at anytime
- Alert function for maximum safety: Heat Pump alert function via apps or e-mail sent to customer and/or installer
- Quick and easy installation: Simply connect the DCM Device to your internet using an Ethernet cable from the heat pump to the homes router for minimal hassle and maximum results.
- New OnLine works with all our current domestic heat pumps and can be offered to new and old customers regardless of what type of heat pump they have.

Danfoss OnLine – How does it work?

Danfoss OnLine is connected to your heat pump through the internet. If you already have an internet connection, your Danfoss partner can plug in the heat pump directly. This means that there are no additional ongoing costs for the data traffic. If you do not already have an internet connection (e.g. in a summer cottage), we recommend acquiring an external 3G/4G modem from any provider. As all data sent from the heat pump is stored on an external server, you can access OnLine at any time – log in from any smartphone, computer or tablet, no matter where you are in the world.

The customers existing broadband connection

The customer's own mobile 3G gateway

(In cases where broadband is not available, internet connection can be solved via an external 3G or 4G modem)
